IRC - Prova intemedia del 28-11-2022 - "Pear to pear"

Using Kathará, implement the network depicted in the above figure and described below.

- O AS100 is a customer of AS10, which is a customer of AS1; AS200 is a customer of AS20, which is a customer of AS2. Further, the following peer-to-peer relationships hold: AS1-AS2 and AS10-AS200.
- o ASBOH is a customer of AS2.
- o The correct AS number of ASBOH is the one announcing 193.204.0.0/15 on the Internet; please, look for it in the Web.

Tasks:

- 1. Configure the network in such a way that all interfaces are reachable from all routers.
- 2. Do **not** use the 0/0.
- 3. The prefixes of the peering LANs can be announced by any of the peers and do not necessarily follow the customer-provider-peer constraints.

Procedura di consegna:

- La directory contenente il lab dovrà chiamarsi (senza spazi o apostrofi!) <cognome><nome> (prima il cognome e poi il nome, es.: la directory di Giuseppe Francesco Maria Di Battista si chiamerà dibattistagiuseppefrancescomaria)
- Crea un archivio compresso (tar, rar, zip,) che contenga la directory sopra citata, chiamandolo con lo stesso nome.
- Consegna il lab, facendo l'upload dell'archivio compresso, su moodle (https://ingegneria.el.uniroma3.it/).
- La consegna deve essere effettuata da un computer del laboratorio o dal proprio dispositivo purché collegato alla rete wireless di ateneo
